

PRODUCT DATA SHEET

Fix points

The installation of adequately anchored fix points at the extremities of the pre-insulated piping system (typically at wall penetrations) is mandatory to secure the connected piping against the potential impact of thermal expansion/retraction and longitudinal reversion of the PE-Xa medium pipe(s).

Failing to do so involves a genuine damage risk and automatically voids the system warranty.

- Pressure rating: PN 16
- Material: DZR brass in accordance with DWD 98/83/EC
- Thread: conical ISO 7-1
